

Project Scope Document

1. Project Overview

Objective:

Build a robust web application with a comprehensive admin panel. The admin has full control over user management, content, calculators, analytics, notifications, and settings. The frontend is built with React; the backend/API with Laravel.

Budget:

₹12,000 INR

2. Project Scope

2.1. Requirements Analysis

- Collect requirements from the client.
 - Define modules, roles, and user journeys.
 - Prepare technical specifications and workflows.
-

2.2. Design & Storyboarding

- Create wireframes for all screens (user, admin).
 - Prepare user journey maps.
 - Approval process for UI/UX before development.
-

2.3. Development

A. Backend (Laravel)

- **Authentication:** Secure login, registration, password reset for users and admins.
- **Admin Role Management:** Use Spatie Laravel Permission for multiple admin roles (Super Admin, Content Manager, etc.).
- **RESTful API:** All actions handled via secure API endpoints.
- **Database:** Eloquent ORM with MySQL/PostgreSQL for user data, calculator logs, settings, etc.
- **Validation:** Server-side validation for all data entries.
- **Notifications:** System and email notifications via Laravel Notifications.

- **Activity Logs:** Record all admin/user actions for audit.
- **API Documentation:** Swagger/OpenAPI for all endpoints.
- **Error Logging:** Centralized with daily reports.
- **Security:** CSRF, XSS, rate limiting, strong password, JWT token or session-based auth.

B. Frontend (React)

- **SPA:** Single Page Application for fast, modern experience.
 - **Public/Member UI:** User-facing pages for calculator usage, login, registration, etc.
 - **Admin Panel SPA:** Separate admin dashboard (accessible after secure admin login).
 - **Routing:** React Router for navigation and protected routes.
 - **State Management:** Redux/Context for handling app state and user sessions.
 - **Forms:** React Hook Form or Formik for robust validation.
 - **API Integration:** Axios or Fetch for backend communication.
 - **Reusable Components:** Buttons, modals, tables, etc.
 - **Notifications:** Toaster messages and alerts.
 - **Error Boundaries:** For stable UI.
 - **SEO:** React Helmet for public-facing meta tags.
-

C. Admin Panel Features

The admin can manage and configure **ALL** app modules:

1. Dashboard Overview

- Key stats: total users, calculator usage, system activity.
- Graphs/charts for quick analytics.

2. User Management

- List, add, edit, activate/deactivate, or delete users.
- Reset user passwords.
- Assign user roles/permissions.

3. Calculator Management

- Create, edit, or remove calculator modules.
- Configure formula parameters.

- Control calculator access (which users can use).
 - View usage statistics and export logs.
 - Edit descriptions, instructions, and labels for calculator UI.
 - Optionally, set visibility for public/private calculators.
- 4. Content Management**
- Manage FAQs, static pages, terms, and privacy policy.
 - Update homepage and banners if applicable.
- 5. Notifications Management**
- Send announcements or notifications to users.
 - View and manage notification logs.
- 6. Reports & Analytics**
- Generate and download reports (CSV/Excel) for users, calculator logs, etc.
 - View activity logs for audits.
- 7. Settings & Configuration**
- General site/app settings (logo, name, email, etc.).
 - Email/SMS templates.
 - SEO configuration for public pages.
 - Control site maintenance mode.
- 8. Security Controls**
- Role-based access and permission management.
 - View all login sessions.
 - Enforce password/2FA settings.
 - View activity/audit logs.
- 9. Support/Contact**
- View and respond to contact or support tickets.
-

2.4. Quality Assurance & UAT

- Manual testing for all workflows.
- UAT: Admin reviews and approves all modules before launch.

- Bug fixing as per UAT feedback.
-

2.5. Deployment & Launch

- Server setup and domain/SSL configuration.
 - Production deployment of Laravel API and React app.
 - Final checklist (security, SEO, backups) and go-live.
 - Handover: credentials, codebase, documentation.
-

3. Out of Scope

- Ongoing maintenance after launch (available as a separate contract).
 - Major third-party integrations not specified in requirements.
 - Mobile app (unless specified separately).
-

4. Timeline

- **Analysis/Design:** 3-4 days
 - **Development:** 10-12 days
 - **QA/UAT:** 2-3 days
 - **Deployment:** 1-2 days
- Total:** 16–21 working days
-

5. Deliverables

- Complete web application (Laravel + React)
 - Admin panel with all features above
 - Source code (with documentation)
 - API documentation (Swagger/OpenAPI)
 - Deployment and user guides
-

6. Tech Stack

- **Backend:** Laravel 10+, PHP 8+, MySQL/PostgreSQL, Composer

- **Frontend:** React 18+, Redux/Context, Material UI/Ant Design, Axios
 - **Admin Tools:** Laravel Spatie Permission, Chart.js/Recharts, Data export
 - **APIs:** RESTful JSON
 - **Version Control:** Git
-

8. Assumptions

- Client provides assets (logo, content) timely.
 - Hosting/domain handled or reimbursed by client.
 - Timely feedback for approvals.
-

9. Optional Add-ons

- Monthly maintenance: ₹2,000 INR/month
 - Advanced features/integrations: billed as needed
-
