

Executive Summary

During the period of October 19th to December 1st, we ran a series of VIP, Early Bird, Black Friday, Cyber Monday, and support campaigns across Meta. This window reflects our full promotional cycle, from presale warm-up through peak shopping days. With limited creative volume, low daily spend, and minimal testing, the campaigns still produced strong results, giving us clear early signals about the funnel's strength and where we can safely begin to scale with the right resources in place.

Date Range: October 19th to December 1st

Channels: Meta

Campaigns Included: VIP, Early Bird, Black Friday, Cyber Monday, Support

Performance Snapshot

- Total ad spend: **\$1,937.58**
- Total revenue from ads: **\$11,617.38**
- Total purchases: **15**
- Blended ROAS: **6.0**
- Estimated profit after COGS and ad spend: **\$6,304.80**

Revenue Breakdown: \$11,617.38 Total

COGS:
\$3,375
29%

Ad Spend:
\$1,937.58
17%

Profit:
\$6,304.80
54%

Oct 19 - Dec 1 | Meta Campaigns

For every \$1 spent on ads, we generated \$6 in revenue and kept \$3.25 in profit.

What This Tells Us

- The product sells when the right people see it.
- The funnel and messaging are strong enough to convert targeted traffic.
- These results were helped by Black Friday urgency, so we should not expect the same ROAS every month.
- Even with low spend, minimal creative, and limited testing, the ads still produced a strong return.

Post-BFCM Update

Black Friday ad success cannot set the bar for Meta ad performance. This was a seasonal variation.

Meta requires 5–10 new creatives each week or every other week, continuous angle testing, and high-volume iteration.

Following the conclusion of Cyber Monday (Dec 1), we wound down promotional campaigns and launched a new Christmas delivery deadline campaign on December 10th. It's too early to evaluate performance on this new initiative. Although we have made changes to our ads, expanding them to a broader audience than to simply retargeting.

What Needs to Happen Next

- We need to maximize high-intent traffic with Google Ads and continue testing Meta ads to drive traffic to the site.
 - Just need some Google ad metrics that can prove if it is a good investment.
- The backend (welcome sequences, lead-gen funnel, evergreen emails) must be built so we can convert more visitors year-round, not just during peak sales. But this will take a backseat to our ads as acquisition is the top priority.
- With Black Friday (including VIP we only spent **\$1,937.58 and generated \$11,617.38 with 15 purchases.**
- I propose that we arrange a \$2,000-\$4,000 budget per month for ads until the end of Q1. Max could have some input on this amount as well.

These steps will allow us to build on the early signals, strengthen the funnel, and scale paid traffic responsibly.
